

PowerTrap

MODEL GP14-B

MECHANICAL PUMP FOR CONDENSATE REMOVAL AND RECOVERY

Features

Pump for a wide range of applications. Ideal for condensate removal from vented receivers and sump drainage.

- 1. Handles high-temperature condensate without cavitation.
- 2. No electric power or additional level controls required, hence INTRINSICALLY SAFE.
- 3. Pump will operate with a low filling head.
- 4. Durable nickel-based alloy compression coil spring.
- 5. Easy, inline access to internal parts simplifies cleaning and reduces maintenance costs.
- 6. High-quality stainless steel internals and hardened working surfaces ensure reliability.
- 7. Cycle Counter installable as option.

Specifications

Model		GP14-B				
Body Material		Cast Iron	Cast Steel			
Connection	Pumped Medium Inlet & Outlet	Screwed	Screwed	Flanged		
	Motive Medium & Pump Exhaust	Screwed	Screwed	Flanged		
Size (mm)	Pumped Medium: Inlet × Outlet	80 >	80 × 50			
	Motive Medium Inlet	2	25			
	Pump Exhaust Outlet	2	25			
Maximum Operating Pressure (MPaG) PMO		1.	1.4			
Maximum Operating Temperature (°C) TMO		200				
Motive Medium Pressure Range (MPaG)		0.03	0.03 to 1.4			
Maximum Allowable Back Pressure		0.05 MPa less than motive medium pressure used, but not to exceed 0.8 MPa				
Volume of Each Discharge Cycle (ℓ)		Appro	Approx. 30			
Motive Medium*		Saturated Steam, Compressed Air, Nitrogen				
Pumped Medium**		Steam Conde	Steam Condensate, Water			

^{*} Do not use with toxic, flammable or otherwise hazardous fluids.

1 MPa = 10.197 kg/cm²

** Do not use for fluids with specific gravities under 0.85 or over 1, or for toxic, flammable or otherwise hazardous fluids.

PRESSURE SHELL DESIGN CONDITIONS (NOT OPERATING CONDITIONS): Maximum Allowable Pressure (MPaG) PMA: 1.4 (Cast Iron), 1.6 (Cast Steel) Maximum Allowable Temperature (°C) TMA: 220

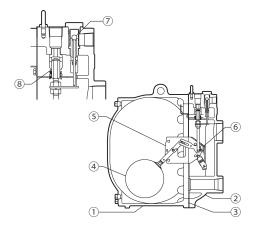

CAUTION

To avoid abnormal operation, accidents or serious injury, DO NOT use this product outside of the specification range. Local regulations may restrict the use of this product to below the conditions quoted.

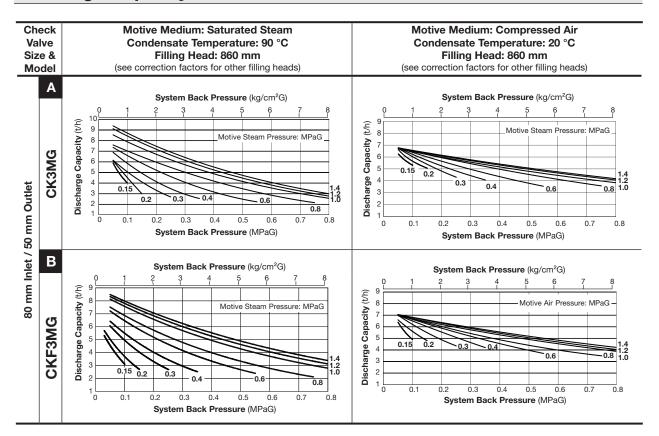

No.	Description		Material	JIS	ASTM/AISI*	
(1)	Body		Cast Iron	FC250	A126 CI.B

	Motive Medium Intake Valve Unit	Intake Valve	Stainless Steel	SUS303/440C	AISI303/440C	
7			Cast Stainless Steel/	-/	A351 Gr.CF8/	
			Stainless Steel	SUS440C	AISI440C	
8	Exhaust Valve Unit	Exhaust Valve	Stainless Steel	SUS420J2	AISI420	
		Valve Seat	Stainless Steel	SUS630	A567 630	
9	Check Valve***	СКЗМС	Cast Stainless Steel	_	A351 Gr.CF8	
		CKF3MG	Cast Stainless Steel	_	A351 Gr.CF8	

^{*} Equivalent ** Option: Cast Stainless Steel

Not shown, model depends on GP14-B connection: CK3MG for screwed, CKF3MG for flanged

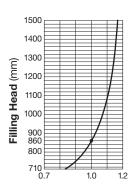

Discharge Capacity

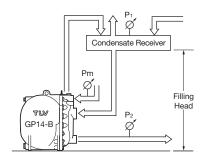

Correction Factor

For GP14-B installed with filling heads other than 860 mm (minimum filling head: 710 mm)

• Illustration of Filling Head and Pressures

The discharge capacity is determined by the motive medium, motive medium pressure (Pm) and back pressure (P2).

Make sure that:
Discharge Capacity × Correction Factor
> Required Flow Rate

NOTE:

- A check valve must be installed at both the pumped medium inlet and outlet. To achieve the above capacities with the standard GP14-B configuration, TLV CK3MG or CKF3MG check valves must be used.
- Motive steam pressure minus back pressure must be greater than 0.05 MPa.
- In closed system applications, the motive medium must be compatible with the liquid being pumped. If a non-condensible gas such as air or nitrogen is used as the motive medium, consult TLV for assistance.
- A strainer must be installed at the motive medium and pumped medium inlets.

Units: mm

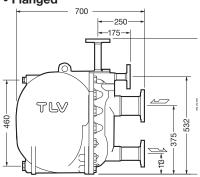

Dimensions

Pump Exhaust Outlet Motive Medium Inlet Pumped Medium Inlet Pumped Medium Outlet

Screwed*

• Flanged**

Weight (kg): 124 (Cast Iron), 136 (Cast Steel)

* Rc (PT), other standards available

Weight (kg): 146 (Cast Steel)

** ASME Class 300 RF, other standards available

Size of Receiver/Reservoir

The receiver/reservoir must have a capacity sufficient to store the condensate produced during the PowerTrap operation and discharge. A receiver will generally be larger than a reservoir because it must handle the condensate both as a liquid and as flash steam, and separate one from the other so that only condensate is sent to the PowerTrap.

1. Size of Receiver; flash steam is involved (Length: 1 m)

Flash steam up to	Receiver diameter	Vent pipe diameter		
(kg/h)	mm (in)	mm (in)		
25	80 (3)	25 (1)		
50	100 (4)	50 (2)		
75	125 (5)	50 (2)		
100	150 (6)	80 (3)		
150	200 (8)	80 (3)		
200	200 (8)	100 (4)		
300	250 (10)	125 (5)		
400	300 (12)	125 (5)		
500	350 (14)	150 (6)		
700	400 (16)	200 (8)		
800	450 (18)	200 (8)		
1000	500 (20)	200 (8)		
1100	500 (20)	250 (10)		
1400	550 (22)	250 (10)		
1500	600 (24)	250 (10)		

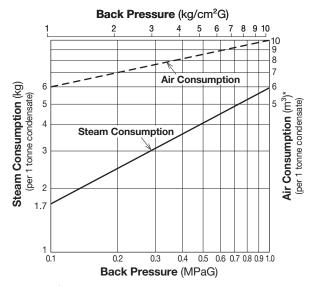

If flash steam is condensed before it enters the receiver/reservoir, compare tables 1 and 2 and choose the larger of the two sizes.

2. Size of Reservoir; flash steam is not involved

		<u> </u>					
Amount of condensate	Reservoir Diameter (mm) and Length (m)						
(kg/h)	40	50	80	100	150	200	250
300 or less	1.2 m	0.7					
400	1.5	1.0					
500	2.0	1.2	0.5				
600		1.5	0.6				
800		2.0	0.8	0.5			
1000			1.0	0.7			
1500			1.5	1.0			
2000			2.0	1.3	0.6		
3000				2.0	0.9	0.5	
4000					1.2	0.7	
5000					1.4	0.8	0.5
6000					1.7	1.0	0.6
7000					2.0	1.2	0.7
8000						1.3	0.8
9000						1.5	0.9
10000						1.7	1.0

Reservoir length can be reduced by 50% when the motive medium pressure (Pm) divided by back pressure (P2) equals 2 or greater (when Pm \div P2 \ge 2).

Steam or Air Consumption (Motive Medium)

^{*} Equivalent consumption of air at 20 °C under atmospheric pressure

Cycle Counter (Option)

Two types of counter can be installed on the GP14-B to monitor the number of pumping cycles and help to determine the timing of maintenance, or estimate the volume of pumped condensate.

- C1CM (Counter Unit Type): Self-contained standalone unit. Includes an LCD counter display and an operation indicator LED.
- C1SM (Terminal Box Type):
 Designed for use with remote monitoring equipment
 and systems.

Intrinsically safe models are also available. See the Cycle Counter SDS for further details.
