

VORTEX FLOWMETER

MODEL EF73 STAINLESS STEEL

RELIABLE FLOW MEASURING SYSTEM FOR STEAM, AIR AND WATER

Features

High-performance vortex flowmeter with robust sensor for highly accurate volume or mass flow measurements of saturated and superheated steam, air and water.

1. DSC (Differential Switched Capacitance) sensor offers a wide measuring range, with a high resistance to thermal shock, vibration and water hammer.
2. Integrated flow computer calculates mass flow from measured volume flow and temperature variables.
3. Capable of simultaneous pulse (interval) and analog (instantaneous) output.
4. Requires no maintenance, has no moving parts, and experiences no zero point drift.
5. Low pressure drop through body.

Specifications

Meter Body / Sensor

Model		EF73	
Connection		Flangeless	Flanged
Size		DN 15, 25, 40, 50, 80, 100, 150	DN 15, 25, 40, 50, 80, 100, 150, 200, 250, 300
Connection Compatibilities		See details in the Dimensions section	
Operating Pressure Range (barg)		0 – 49.6 (See the table to the right for details)	
Temperature Range (°C)		-200 ¹⁾ – +400 (See the table to the right for details)	
Applicable Fluids ^{2) 3)}		Steam, Air, Water	
Accuracy	Volume Flow	Gas/Steam: ± 1% of reading (Re > 20000), ± 1% of full scale (Re: 4000 – 20000) Liquid: ± 0.75% of reading (Re > 20000) ± 0.75% of full scale (Re: 4000 – 20000)	
	Mass Flow	Saturated ± 2% of reading ⁴⁾ (Re > 20000) Steam: ± 2% of full scale ⁴⁾ (Re: 4000 – 20000)	
Repeatability		Within 0.25% of reading	
Vibration Resistance		At least 1G in all directions (10 – 500 Hz)	
Mounting Position		No restriction with regards to meter accuracy	

- 1) Subject to the limitations of fluid freezing point 2) For superheated steam and air, an external pressure sensor and flow computer may be required if inlet pressure fluctuates
3) Do not use for toxic, flammable or otherwise hazardous fluids 4) ±2.3% for remote version

Transmitter

Explosion Class	Non-explosion proof
Ambient Temperature	Compact Type: -40 – +70 °C Remote Type: -40 – +80 °C
Ingress Resistance	IP 67 (NEMA 4X)
Output	Frequency (pulse) output: Open collector pulse (passive) Analog output: 4 – 20 mA DC
Power Source	12 – 36 V DC (24 V DC recommended)
Power Consumption	1.2 W DC (including sensor)
Power Line Connection	G(PF)½
Field Wiring	2-wire System (2-conductor, shielded, at least 1.25 mm²)
Load Line Resistance	Maximum 550Ω at 24 V

Pressure/Temperature Operating Range

1 bar = 0.1 MPa

Reynolds Number (Re) Calculation:

$$Re = \frac{d \times V}{\nu}$$

d = pipe diameter V = velocity
ν = viscosity

Transmitter Terminals

- A: Power supply/ current output
- B: Optional frequency output
- C: Ground terminal (for remote version)

Display

Sample display

To avoid abnormal operation, accidents or serious injury, DO NOT use this product outside of the specification range. Local regulations may restrict the use of this product to below the conditions quoted.

Specifications

No.	Description	Material*	DIN*	ASTM/AISI
①	Meter Body	Cast Stainless Steel SCS16A	1.4435	A351 Gr. CF3M
②	Bluff Body	Cast Stainless Steel SCS16A	1.4435	A351 Gr. CF3M
③	DSC Sensor (wetted parts)	Stainless Steel SUS316L	1.4435	AISI316L*
④	DSC Sensor (non-wetted parts)	Stainless Steel SUS304	1.4301	AISI304*
④	Pipe Stand	Cast Stainless Steel SCS13A	1.4312	A351 Gr. CF8
⑤	Transmitter Housing	Die-cast Aluminum	—	—
⑥	Gasket	Graphite	—	—
⑦	Nameplate	—	—	—
⑧	Mounting Kit**	—	—	—
⑨	Remote Transmitter Mount***	Die-cast Aluminum	—	—
⑩	Connecting Cable (30 m)***	—	—	—

* Equivalent materials
 ** Flangeless model only, to ensure concentric installation; includes centering rings, threaded bolts, nuts, washers and flange gaskets
 *** Remote version only, see next page

Piping Installation

Required Length of Straight Piping

Element	No Flow Conditioner	With Flow Conditioner (Rectifier)
Control Valve		
Concentric Reducer (Convergent-Pipe)		
Concentric Diffuser (Expansion-Pipe)		
Eccentric Reducer (Convergent-Pipe)		
One 90° Elbow or T-piece		
Two 90° Elbows (2-Dimensional)		
Two 90° Elbows (3-Dimensional)		
Combination Pipe (Elbows & Eccentric Reducer, etc.)		

A = Upstream, B = Downstream, D = Nominal Diameter

Mounting Position

There is no restriction for mounting position (A – D) in regards to meter accuracy. However, special care is recommended for the following flow mediums:

- High-temperature Fluids**
For high-temperature fluids (steam, condensate), positions A, B or C should be selected to protect the transmitter from heat.
- Water**
To make sure the pipes are completely flooded with Water, position C is recommended.

Pressure Measurement Points

If a pressure measuring point is installed after the device, ensure that there is a large enough distance between the device and the measuring point so that there are no negative effects on vortex formation in the sensor.

Pipeline Insulation

The pipe stand serves as a radiator and protects the electronics from overheating. Therefore, ensure that sufficient surface area remains exposed. Be sure not to insulate passed the level marked "max." on the pipe stand.

Ensuring Steam Quality

Wet steam has a higher density than saturated steam. Since the flowmeter mass flow calculations are based on saturated steam density, the actual mass flow of wet steam will be higher than shown by the flowmeter. The upstream installation of a separator (DC3S) is suggested to ensure steam quality and flowmeter accuracy. The proper separation and drainage of condensate is a recommended practice for all steam applications.

DC3S separator with built-in steam trap

Dimensions
