Instruction Manual

Pneumatic Direct-acting Pressure Reducing Valve for Steam and Air

PN-DR

Copyright © 2018 by TLV CO., LTD.
All rights reserved
Introduction

Thank you for purchasing the TLV PN-DR pneumatic direct-acting pressure reducing valve for steam and air.

This product has been thoroughly inspected before being shipped from the factory. When the product is delivered, before doing anything else, check the specifications and external appearance to make sure nothing is out of the ordinary. Also be sure to read this manual carefully before use and follow the instructions to be sure of using the product properly.

The TLV PN-DR pneumatic direct-acting pressure reducing valve provides a more stable secondary pressure than conventional direct-acting reducing valves. The PN-DR is designed for a long service life, and is made of stainless steel for superior durability.

For products with special order specifications or options, if detailed instructions for the special order specifications or options are not contained in this manual, please contact TLV for full details.

This instruction manual is intended for use with the model(s) listed on the front cover. It is necessary not only for installation but for subsequent maintenance, disassembly/reassembly and troubleshooting. Please keep it in a safe place for future reference.
Safety Considerations

- Read this section carefully before use and be sure to follow the instructions.
- Installation, inspection, maintenance, repairs, disassembly, adjustment and valve opening/closing should be carried out only by trained maintenance personnel.
- The precautions listed in this manual are designed to ensure safety and prevent equipment damage and personal injury. For situations that may occur as a result of erroneous handling, three different types of cautionary items are used to indicate the degree of urgency and the scale of potential damage and danger: DANGER, WARNING and CAUTION.
- The three types of cautionary items above are very important for safety: be sure to observe all of them as they relate to installation, use, maintenance, and repair. Furthermore, TLV accepts no responsibility for any accidents or damage occurring as a result of failure to observe these precautions.

Symbols

**!** Indicates a DANGER, WARNING or CAUTION item.

- **DANGER**: Indicates an urgent situation which poses a threat of death or serious injury
- **WARNING**: Indicates that there is a potential threat of death or serious injury
- **CAUTION**: Indicates that there is a possibility of injury or equipment / product damage

**CAUTION** Install properly and DO NOT use this product outside the recommended operating pressure, temperature and other specification ranges. Improper use may result in such hazards as damage to the product or malfunctions that may lead to serious accidents. Local regulations may restrict the use of this product to below the conditions quoted.

**Take measures to prevent people from coming into direct contact with product outlets.** Failure to do so may result in burns or other injury from the discharge of fluids.

**When disassembling or removing the product, wait until the internal pressure equals atmospheric pressure and the surface of the product has cooled to room temperature.** Disassembling or removing the product when it is hot or under pressure may lead to discharge of fluids, causing burns, other injuries or damage.

**Be sure to use only the recommended components when repairing the product, and NEVER attempt to modify the product in any way.** Failure to observe these precautions may result in damage to the product and burns or other injury due to malfunction or the discharge of fluids.

Safety considerations continued on next page.
CAUTION

Do not use excessive force when connecting threaded pipes to the product.
Over-tightening may cause breakage leading to fluid discharge, which may cause burns or other injury.

Use only under conditions in which no freeze-up will occur.
Freezing may damage the product, leading to fluid discharge, which may cause burns or other injury.

Use only under conditions in which no water hammer will occur.
The impact of water hammer may damage the product, leading to fluid discharge, which may cause burns or other injury.
Specifications

**CAUTION**
Install properly and DO NOT use this product outside the recommended operating pressure, temperature and other specification ranges. Improper use may result in such hazards as damage to the product or malfunctions which may lead to serious accidents. Local regulations may restrict the use of this product to below the conditions quoted.

**CAUTION**
Use only under conditions in which no freeze-up will occur. Freezing may damage the product, leading to fluid discharge, which may cause burns or other injury.

Refer to the product nameplate for detailed specifications.

* Replacement parts are available only in the following kits:
  A: Maintenance Kit
  B: Repair Kit for Spacer
  C: Repair Kit for Main Valve,
  D: Repair Kit for Bellows
  E: Repair Kit for Adjustment Handle

* Number of parts: 2 pieces
* Shipped as a unit
Correct Usage of the **PN-DR** Direct-acting Pressure Reducing Valve

**CAUTION**
Install properly and **DO NOT** use this product outside the recommended operating pressure, temperature and other specification ranges. Improper use may result in such hazards as damage to the product or malfunctions which may lead to serious accidents. Local regulations may restrict the use of this product to below the conditions quoted.

1. The **PN-DR** should be operated only within its specifications.

2. Installing an ON/OFF Valve (Solenoid Valve or Motorized Valve)

   ![Diagram of PN-DR with Motorized Valve at Inlet Side and Solenoid Valve at Outlet Side]

   If an on-off valve is required to stop supply of steam or air to the equipment, install it at the inlet side of the **PN-DR**.

   If a solenoid valve is installed at the outlet of the **PN-DR**, it will cause heavy chattering and may lead to damage of the **PN-DR**. (When the on-off valve opens, the secondary pressure of the reducing valve changes from zero to the set pressure. Passing through an area of the reducing ratio of less than 30:1 where adjustment is impossible, chattering occurs momentarily.) To save energy, install the on-off valve as near to the boiler, or compressor, as possible.

   **NOTE:** To prevent water hammer, it is recommended that a slow-acting motorized on-off valve be used. If a fast-acting solenoid valve is used, the potential water hammer effect can damage the equipment and the pressure reducing valve.

3. Installing a Control and/or Safety Valve

   ![Diagram of PN-DR with Control Valve and Safety Valve]

   A control valve (i.e., for temperature control) installed between the **PN-DR** and the equipment (downstream of the **PN-DR**) may raise the pressure between the **PN-DR** and the control valve when the control valve is closed, depending on their proximity. Therefore, this valve should be installed close to the steam- or air-using equipment, as illustrated. Also, a safety valve should be installed downstream of the control valve.

   **NOTE:** When installing a safety valve to protect the steam- or air-using equipment, be sure to install it on the steam- or air-using equipment, or directly before the inlet of the equipment. If the safety valve is installed between the **PN-DR** and a control valve, an eventual pressure rise could activate the safety valve.
4. Recommended Straight Pipe Runs
In order to ensure a stable flow of air or steam, the piping upstream and downstream of the PN-DR must be straight runs. If the PN-DR is installed either directly before or after an elbow or control valve, unevenness in flow may result in chattering and unstable pressure.
To ensure a stable flow, it is recommended that the PN-DR be installed on straight runs of piping, as illustrated below.

1. Inlet (primary side) of the PN-DR
Maintain a straight piping run of **10 d or more** when a manual valve, a strainer or an elbow, etc. is installed.
(Example: if nominal size is 25 mm (1 in), have 250 mm (10 in) or more)

Maintain a straight piping run of **30 d or more** when an automated valve (on-off valve) is installed.
(Example: if nominal size is 25 mm (1 in), have 750 mm (30 in) or more)

Maintain a straight piping run of **30 d or more** when another pressure reducing valve is installed. (Two-stage pressure reduction)
(Example: if nominal size is 25 mm (1 in), have 750 mm (30 in) or more)

2. Outlet (secondary side) of the PN-DR
Maintain a straight piping run of **15 d or more** when a manual valve, a strainer or an elbow, etc. is installed.
(Example: if nominal size is 25 mm (1 in), have 375 mm (15 in) or more)

Maintain a straight piping run of **30 d or more** when a safety valve is installed.
(Example: if nominal size is 25 mm (1 in), have 750 mm (30 in) or more)
Installation

**CAUTION** Install properly and DO NOT use this product outside the recommended operating pressure, temperature and other specification ranges. Improper use may result in such hazards as damage to the product or malfunctions which may lead to serious accidents. Local regulations may restrict the use of this product to below the conditions quoted.

**CAUTION** Take measures to prevent people from coming into direct contact with product outlets. Failure to do so may result in burns or other injury from the discharge of fluids.

Installation, inspection, maintenance, repairs, disassembly, adjustment and valve opening/closing should be carried out only by trained maintenance personnel.

1. **Blowdown**

![Blowdown Diagram]

Before installing the PN-DR unit, be sure to blow down all piping thoroughly. If this is not possible, perform a blowdown using the bypass valve. Blowdown is especially important for newly installed piping or after the system has been shut down for a long period of time.

2. **Removing the Protective Caps**

Before installation, be sure to remove all protective seals and caps covering the product inlet/outlet and the connecting port. (Found in 3 locations; on the product inlet and outlet, motive air connecting port.)

3. **Installation Angle**

Make sure the PN-DR is installed on horizontal piping with the adjustment handle facing up. Ensure the raised TLV lettering on the body is horizontal and the arrow is pointing in the direction of flow. The allowable inclination of the PN-DR is 10° front-to-back and 15° horizontally.

4. **Piping Support**

Install the PN-DR paying attention to avoid excessive load, bending and vibration. Support the inlet and outlet pipes securely.

![Piping Support Diagram]
5. Maintenance Space
Leave sufficient space for maintenance, inspection and repair.

Unit: mm (in)

6. Piping Size/Diffuser
If it is expected that the secondary flow velocity will be more than 30m/s (100 ft/s), install a diffuser in order to keep the flow velocity below 30m/s (100 ft/s). If the distance between the PN-DR and the steam- and air-using equipment is great, a possible drop in pressure should be taken into consideration when selecting the piping size. If installing a strainer, horizontal installation is recommended in order to prevent pooling of condensate.

7. Two-stage Pressure Reduction
Employ 2-stage pressure reduction if the required reduction is not possible due to PN-DR operating range limitations (when it is not possible to reduce to the desired pressure using a single PN-DR).
8. Accessories

Always install a bypass line. At the inlet and outlet, install a pressure gauge and a shut-off valve. Ball valves, which will not retain condensate, are recommended for inlet/outlet shut-off valves. The nominal pipe size for the bypass line should be \( \frac{1}{2} \) or greater of the primary pipe size.

9. Motive Air

Supply oil free air filtered to 5 µm for the motive air and adjust the air pressure to match desired value by using an air regulator or similar device.
Adjustment

The PN-DR can set secondary pressure(s) either by operation of the adjustment handle or adjustment of the motive air pressure, or a combination of both.

To avoid problems such as water hammer and to protect steam- and air-using equipment, the PN-DR should be correctly adjusted.

1. It is necessary to blow down all pipelines thoroughly. The blowdown is especially important if the line is new or has been shut down for a long period of time. Take particular care to ensure that matter such as condensate and dirt does not remain inside the steam- and air-using equipment. (Stay clear of any pressurized blow-out from the safety valve.)

2. Make sure that the shut-off and bypass valves located upstream and downstream of the PN-DR are completely closed.

3. Turn the adjustment handle counter-clockwise to free the coil spring.

4. Slowly, fully open the shut-off valve at the inlet of the PN-DR.

5. Slightly open the shut-off valve at the outlet of the PN-DR.

6. Slowly turn the adjustment handle clockwise until the desired secondary (steam or air) pressure is obtained with the pressure of the coil spring. Wait several minutes. Be careful not to make rapid adjustments as the safety valve may be activated or equipment may be damaged by water hammer.

7. Slowly, fully open the shut-off valve at the outlet of the PN-DR.

8. When shutting down the system, always close the outlet shut-off valve first and then the inlet valve.
Maintenance

**CAUTION**
Take measures to prevent people from coming into direct contact with product outlets. Failure to do so may result in burns or other injury from the discharge of fluids.

**CAUTION**
Be sure to use only the recommended components when repairing the product, and NEVER attempt to modify the product in any way. Failure to observe these precautions may result in damage to the product or burns or other injury due to malfunction or the discharge of fluids.

Operational Check
To ensure a long service life for the **PN-DR**, the following inspection and maintenance should be performed regularly.

<table>
<thead>
<tr>
<th>Part</th>
<th>Inspection and Maintenance Frequency</th>
</tr>
</thead>
<tbody>
<tr>
<td>Screen</td>
<td>Disassemble and clean annually. If there is substantial blockage, install a strainer (approximately 60 mesh) ahead of the <strong>PN-DR</strong>.</td>
</tr>
<tr>
<td>Main Valve, Valve Seat</td>
<td>If there is chattering or dirt, premature wear may result.</td>
</tr>
<tr>
<td>Valve Stem, Spacer (Slide Bearing)</td>
<td>If hunting or chattering takes place, premature wear may result.</td>
</tr>
<tr>
<td>Bellows</td>
<td>If hunting or chattering takes place, cracks or fatigue may develop in a short period of time.</td>
</tr>
<tr>
<td>Seal Ring</td>
<td>Replace annually. Premature wear may occur.</td>
</tr>
<tr>
<td>Packing</td>
<td>Replace annually. Premature wear may occur.</td>
</tr>
</tbody>
</table>
Disassembly

It is a recommended practice to dismantle and inspect the PN-DR once a year for preventive maintenance purposes. It is especially important to perform an inspection immediately after the initial run of a new line or before or after equipment such as a heater is taken out of service for a long period of time. (Installation, inspection, maintenance, repairs, disassembly, adjustment and valve opening/closing should be carried out only by trained maintenance personnel.)

Remove all steam/pressurized air from the piping (both upstream and downstream). Remove all motive air pressure.
Wait for the body to cool before attempting to remove the PN-DR from the line. Then remove the PN-DR from the piping, and secure it in a vise to perform the inspection.

Disassembling the Adjusting Section

Loosen the adjustment handle completely and remove the cover bolts. After removing the cover, you will see the steel ball, the spring retainer and the coil spring. 
▷ Check for seizure or any damaged screw threads.
Remove the retaining ring. The seal ring and the packing can be removed by loosening the adjustment handle and the holder nut.
▷ Check and make sure that the seal ring has not deteriorated and the packing has no abnormalities.
Disassembling the Bellows Section
Remove the bellows from the body, then the valve stem. Pinch the straight sections of the snap ring that is holding the spacer together using a tool such as needle-nose pliers and remove the snap ring. Remove the spacer.

Disassembling the Valve Section
Loosen the valve seat with a wrench and remove it from the body. The coil spring is exerting an upward pressure on the bottom of the valve seat, so be careful that the valve seat is not thrown out. After removing the valve seat, remove the main valve, the coil spring and the screen.

Cleaning
After inspection and removal of any abnormalities, clean and reassemble the parts. The following parts will require cleaning before reassembly:

- Threads of the adjustment handle
- Threads of the cover, bellows, holder nut, valve stem, main valve, valve seat, spacer (including slide bearing), screen

It is permissible to clean using water. However, cleaning with a mild detergent is recommended for more effective cleaning.

- Cover Gasket
- Snap Ring (2)
- Main Valve
- Screen
- Body

*1 Cannot be removed individually as it is incorporated with the spacer

*2 Insert the snap ring so that both ends are facing down.
Reassembly

Reassemble the unit using the same procedure as used for disassembling it; but in reverse order. In addition, observe the following precautions:

1. The PTFE gasket may be re-used if free from fault, crushing or deformation.

2. Apply anti-seize to the steel ball and threaded portions of screws, bolts and the adjustment handle. Apply a small amount of anti-seize agent to the threads of the valve seat carefully to ensure it does not come into contact with other parts.

3. Fasten the bolts one at a time in a diagonal pattern alternately to provide uniform seating.

4. After assembly, make sure that the valve stem operates smoothly without binding.

![Valve Seating Surface]

As shown in the figures above, when the valve is tightened it may become off-centered on the valve seat. If this occurs, move the valve back to center.

5. Standard torque for fastening the respective screws and the width across flats of the tools to be used are as follows:

<table>
<thead>
<tr>
<th>Part</th>
<th>Torque N·m (lbf·ft)</th>
<th>Distance Across Flats mm (in)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cover Bolt</td>
<td>25 (19)</td>
<td>13 (1/2)</td>
</tr>
<tr>
<td>Valve Seat</td>
<td>120 (88)</td>
<td>27 (1 1/16)</td>
</tr>
<tr>
<td>Holder Nut</td>
<td>10 (7)</td>
<td>30 (1 3/16)</td>
</tr>
</tbody>
</table>

(1 N·m ≈ 10 kg·cm)

NOTE: - If drawings or other special documentation were supplied for the product, any torque given there takes precedence over values shown here.
Troubleshooting

When disassembling or removing the product, wait until the internal pressure equals atmospheric pressure and the surface of the product has cooled to room temperature. Disassembling or removing the product when it is hot or under pressure may lead to discharge of fluids, causing burns, other injuries or damage.

This product is shipped after stringent checks and inspection, and should perform its intended function for a long period of time without failure. However, should there be any problem encountered in the operation of the PN-DR, consult the troubleshooting guide below. Problems are classified as follows:

1. The secondary pressure does not increase
2. The secondary pressure cannot be adjusted or increases abnormally
3. Hunting (fluctuation of the secondary pressure) occurs
4. Chattering (a heavy mechanical noise) occurs
5. Abnormal noises

Major causes for the above problems are usage under non-specified conditions (out of specification), insufficient pressure or flow rate, and clogs by dirt and scale. To ensure performance for a long period of time, it is recommended that the “Acceptable Operating Range”, “Correct Usage of the PN-DR Direct-acting Pressure Reducing Valve” and “Adjustment” sections be reviewed.

**NOTE:** When replacing parts with new, use the parts list for reference and replace with parts from the Maintenance Kit, Repair Kit, etc. (Please note that replacement parts are only available in pre-packaged kits.)
Product Warranty

1. Warranty Period
   One year following product delivery.

2. Warranty Coverage
   TLV CO., LTD. warrants this product to the original purchaser to be free from defective materials and workmanship. Under this warranty, the product will be repaired or replaced at our option, without charge for parts or labor.

3. This product warranty will not apply to cosmetic defects, nor to any product whose exterior has been damaged or defaced; nor does it apply in the following cases:
   1) Malfunctions due to improper installation, use, handling, etc., by other than TLV CO., LTD. authorized service representatives.
   2) Malfunctions due to dirt, scale, rust, etc.
   3) Malfunctions due to improper disassembly and reassembly, or inadequate inspection and maintenance by other than TLV CO., LTD. authorized service representatives.
   4) Malfunctions due to disasters or forces of nature.
   5) Accidents or malfunctions due to any other cause beyond the control of TLV CO., LTD.

4. Under no circumstances will TLV CO., LTD. be liable for consequential economic loss damage or consequential damage to property.
