

PowerTrap®

MODEL GT10

MECHANICAL PUMP WITH STEAM TRAP FOR CONDENSATE REMOVAL AND RECOVERY

Features

Pump/Trap with built-in steam trap for a wide range of applications: drainage of heat exchangers, flash steam recovery systems and non-vented receivers such as low-pressure stages of turbines and absorption chillers, often operating under vacuum conditions.

1. Handles high-temperature condensate without cavitation.
2. No electric power or additional level controls required, hence **INTRINSICALLY SAFE**.
3. Pump will operate with a low filling head.
4. Durable nickel-based alloy compression coil spring.
5. Easy, inline access to internal parts simplifies cleaning and reduces maintenance costs.
6. High-quality stainless steel internals and hardened working surfaces ensure reliability.

Discharge Capacity

NOTE:

- A check valve must be installed at both the pumped medium inlet and outlet. To achieve the above capacities with the standard GT10 configuration, TLV CK3MG or CKF3MG check valves must be used.
- Motive medium pressure minus back pressure must be greater than 0.05 MPa.
- A strainer must be installed at the motive medium and pumped medium inlets.

• Illustration of Filling Head and Pressures

The discharge capacity is determined by the motive medium, motive medium pressure (P_m) and back pressure (P_2).

Make sure that:
 Discharge Capacity × Correction Factor > Required Flow Rate

Dimensions

Units: mm

Size of Reservoir

The reservoir must have a capacity sufficient to store the condensate produced during the **PowerTrap** operation and discharge.

Size of Reservoir (flash steam is not involved)

Amount of Condensate (kg/h)	Reservoir Diameter (mm) and Length (m)						
	40	50	80	100	150	200	250
300 or less	1.2m	0.7					
400	1.5	1.0					
500	2.0	1.2	0.5				
600		1.5	0.6				
800		2.0	0.8	0.5			
1000			1.0	0.7			
1500			1.5	1.0			
2000			2.0	1.3	0.6		
3000				2.0	0.9	0.5	
4000					1.2	0.7	
5000					1.4	0.8	0.5
6000					1.7	1.0	0.6
7000					2.0	1.2	0.7
8000						1.3	0.8
9000						1.5	0.9
10000						1.7	1.0

Reservoir length can be reduced by 50% when the motive medium pressure (Pm) divided by back pressure (P2) equals 2 or greater (when $P_m \div P_2 \geq 2$).

Steam Consumption (Motive Medium)

GT10 Steam Trap Discharge Capacity

- : Capacity of GT10 as a steam trap ($P_1 > P_2$). Instantaneous condensate loads above the rated trap capacity will cause the pump to cycle and therefore reduce the discharge capacity.
 - - - : Minimum amount of condensate required to prevent steam leakage.
1. Capacities are based on continuous discharge of condensate 6 °C below steam temperature.
 2. Differential pressure is the difference between inlet and outlet pressure of the trap.

DO NOT use this product under conditions that exceed maximum differential pressure, as condensate backup will occur!
