

PRESSURE TRANSMITTER

MODEL MBS33M

ROBUST PRESSURE TRANSMITTER FOR STEAM CONTROL SYSTEMS

Features

The MBS33M is an electronic pressure transmitter designed for direct installation at the measuring point. It has been developed for operation in harsh industrial and climatic environments.

1. Four silicone strain gauges on a silicon chip working to the piezoresistive principle ensure high accuracy.
2. Built-in HF filter makes the MBS33M immune to electromagnetic noise and offers protection against interference from mobile telephones, electric motors etc.
3. Amplified linearized and temperature-compensated current output signal of 4 to 20 mA can be transmitted over long distances without difficulties.
4. Enclosure molded-in with a silicone compound gives maximum protection against high ambient temperature, dust and moisture.
5. Resistant to pressure surge, overpressure and vibration up to 20 G in the frequency range 20 Hz to 2 kHz.
