

# VORTEX FLOWMETER

## MODEL EF200-C

RELIABLE FLOW MEASURING SYSTEM FOR STEAM, AIR AND WATER

### Features

**High-performance vortex flowmeter with robust sensor for highly accurate volume or mass flow measurements of saturated and superheated steam, air and water.**

1. DSC (Differential Switched Capacitance) sensor offers a wide measuring range, with a high resistance to thermal shock, vibration and water hammer.
2. Integrated pressure measuring unit enables mass flow calculation even for superheated steam at fluctuating pressures - all in one device. Optional for EF200F-C and EF200R-C.
3. Integrated flow computer calculates mass flow from measured volume flow and temperature variables.
4. Measures steam dryness fraction (80 to 100%) — Optional for EF200F-C. See page 3 for conditions.
5. Capable of simultaneous pulse (interval) and analog (instantaneous) output.
6. Requires no maintenance, has no moving parts, and experiences no zero point drift.
7. Low pressure drop through body.
8. Can be used under vacuum conditions.

### Specifications

#### Meter Body / Sensor

Model	EF200W-C	EF200F-C	EF200R-C		
Connection	Between Flanges (Flangeless, Full Bore)	Flanged (Full Bore)	Flanged (Reduced Bore)		
Size (mm)	15, 25, 40, 50, 80, 100, 150	15, 25, 40, 50, 80, 100, 150, 200, 250, 300	25, 40, 50, 80, 100, 150, 200		
Connection Compatibilities	See details in the Dimensions section				
Operating Press. Range (MPaG)	0 <sup>(1)</sup> to 4.96 (See the graph to the right for details)				
Temperature Range (°C)	-200 <sup>(2)</sup> to +400 (See the graph to the right for details)				
Applicable Fluids <sup>(3)</sup> <sup>(4)</sup>	Steam, Air, Water				
Accuracy <sup>(5)</sup>	Volume Flow Steam / Air : ±1% of reading (Re>20000) Water : ±0.75% of reading (Re>20000) Mass Flow : ±10% of reading (Re: 5000 to 20000)	Steam / Air : ±1% of reading (Re>10000) Water : ±0.75% of reading (Re>10000) Mass Flow : ±2.0% of reading (Re>20000) ±10% of reading (Re: 5000 to 20000)	Steam / Air : ±5% of reading (Re: 5000 to 10000) Water : ±5% of reading (Re: 5000 to 10000) Mass Flow : ±5.7% of reading (Re: 5000 to 10000)		
	Repeatability	± 0.2% of reading			
Mounting Position	No restriction with regards to meter accuracy				
Accessories <sup>(6)</sup>	Centering rings, threaded bolts, nuts, washers and flange gaskets				

- 1) Can be used under vacuum conditions. Contact TLV for details.
- 2) Subject to the limitations of fluid freezing point <sup>(3)</sup> For superheated steam and air, an external pressure sensor and flow computer may be required if inlet pressure fluctuates
- 4) Do not use for toxic, flammable or otherwise hazardous fluids
- 5) Accuracy may be lower than indicated for wet saturated steam (steam mixed with condensate)
- 6) For flangeless model EF200W-C only, to ensure concentric installation

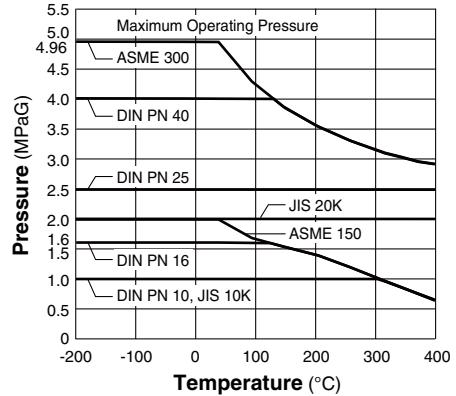

#### Transmitter

Explosion Class	Non-explosion proof
Ambient Temperature	-40 to +80 °C
Protection Class	IP66 and IP67, NEMA 4X
Output	Output 1: Analog output 4 to 20 mA DC Output 2: Open collector pulse (Pulse, frequency, or switch output) Simultaneous output possible
Power Source	13 to 35 V DC (24 V DC recommended)
Power Consumption	Max. 2.77 VA
Power Line Connection	G½
Field Wiring	2-wire System (2-conductor, shielded, 0.5 to 2.5 mm <sup>2</sup> ) (AWG 20 to 14)
Load Line Resistance	Maximum 500 Ω at 24 V
Accessories*	Connecting Cable (30 m)

To avoid abnormal operation, accidents or serious injury, DO NOT use this product outside of the specification range. Local regulations may restrict the use of this product to below the conditions quoted.

#### Pressure/Temperature Operating Range

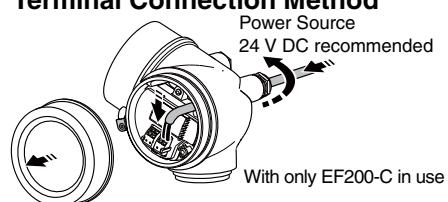

Reynolds Number (Re) Calculation:

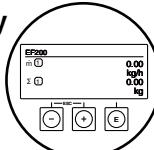

$$Re = \frac{d \times V}{v}$$

d = pipe diameter      V = velocity  
v = viscosity

#### Terminal Connection Method

## Piping Installation

### Required Length of Straight Piping

Element	No Flow Conditioner	With Flow Conditioner* (Rectifier)
Control Valve		
Concentric Reducer (Convergent-Pipe)		
Concentric Diffuser (Expansion-Pipe)		
Eccentric Reducer (Convergent-Pipe)		
One 90 Elbow or T-piece		
Two 90 Elbows (2-Dimensional)		
Two 90 Elbows (3-Dimensional)		
Combination Pipe (Elbows & Eccentric Reducer, etc.)		

A = Upstream, B = Downstream, D = Nominal Diameter

\* Cannot be used in conjunction with the Steam Dryness Fraction Calculator option

Note: • The installation positions shown are for steam and high temperature fluids

• Minimum required piping length shown. Use longer straight piping where possible.

### Mounting Position

There is no restriction for mounting position (A – D) in regards to meter accuracy. However, special care is recommended for the following flow mediums:

#### 1. High-temperature Fluids

For high-temperature fluids (steam, condensate), positions A, B or C should be selected to protect the transmitter from heat.

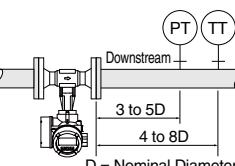

#### 2. Water

To make sure the pipes are completely flooded with water, position C is recommended.

### Pressure Measurement Points

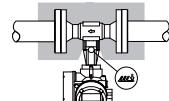

If a pressure measuring point is installed after the device, ensure that

there is a large enough distance between the device and the measuring point so that there are no negative effects on vortex formation in the sensor.

### Pipeline Insulation

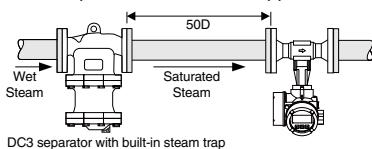

The pipe stand serves as a radiator and protects the electronics from overheating.

Therefore, ensure that sufficient surface area remains exposed. Be sure not to insulate past the level marked "max." on the pipe stand.

### Ensuring Steam Quality

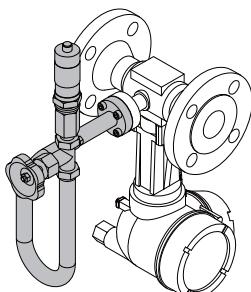

Wet steam has a higher density than saturated steam. Since the flowmeter mass flow calculations are based on saturated steam density, the actual mass flow of wet steam will be higher than shown by the flowmeter. The upstream installation of a separator (DC3S) is suggested to ensure steam quality and flowmeter accuracy. The proper separation and drainage of condensate is a recommended practice for all steam applications.

## Options

Steam Dryness Fraction Calculator	Enables the measurement of steam dryness fraction of saturated steam between 80 to 100%. This option applies only for Model EF200F-C (sizes 25 to 300 mm) and must also satisfy other conditions. See below for further restrictions.
Overvoltage Protection	Protects the circuit from lightning
Flow Conditioner	Compatible with ASME Class 150, 300, JIS 10K/20K, and PN 10/16, 25/40 flange standards and other optional standards (including flangeless). Cannot be used in conjunction with the Steam Dryness Fraction Calculator option.
Pipe Mounting Kit for Remote Transmitter	Suitable for pipes with 20 to 70 mm outer diameter. (Includes bracket, threaded bolts and nuts.)
Sunshade for Transmitter	Protects the transmitter from temperature rises due to direct sunlight when installed in an external location.
Pressure measuring unit (EF200F-C, EF200R-C)	Integrated pressure measurement sensor. Pressure compensation is possible with just the flowmeter. * See "Pressure Measuring Unit Details"

## • Pressure Measuring Unit Details

Measurement range	0.001 to 4 MPaA or 0.001 to 10 MPaA
Connection	Connect to the dedicated flange provided on the flowmeter body. The mounting direction can be changed in 90° increments.
Component parts	Pressure measuring cell, siphon, shutoff valve, cable
Material	Stainless steel

1. Do not remove the siphon tube as it is essential for steam pressure measurement.
2. The pressure measuring unit is available as an option for EF200F-C and EF200R-C only. It cannot be fitted to non-compatible flowmeters, nor retroactively fitted to the standard EF200F-C or EF200R-C.
3. Models with the pressure measuring unit are recommended for applications with pressure fluctuations.
4. Not available for size 15 mm.

## Conditions for optional “Steam Dryness Fraction Calculator”

### Steam Dryness Fraction

The ratio of steam by mass in wet saturated steam

$$\text{Steam Dryness Fraction (\%)} = \frac{\text{Steam mass flow rate}}{\left( \frac{\text{Steam mass flow rate}}{\text{Water mass flow rate}} + 1 \right)} \times 100$$

This function can be used only for the following models and under the following conditions.

Model	Size (mm)	Flow velocity (m/s)	Temp. Range (°C)	Press. Range (MPaG)
EF200F-C	25, 40, 50, 80, 100, 150, 200, 250, 300	5 ≤ u ≤ 50	82 < T < 320	-0.05 < P < 9.89

EF200F-C with optional pressure measuring unit is recommended for applications prone to pressure fluctuations.

### Flow Rates

Refer to the EF200F-C table on page 4 for the measurable flow rates.

### Mounting Position

Meter body must be installed in the downward position.

### Operating Conditions

Use at a stable pressure and flow rate.

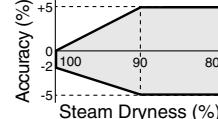

### Measurable Dryness Range

80 to 100%

(When used with superheated steam, steam dryness fraction will be displayed as 100%, the maximum possible reading)

### Accuracy for wetted steam

Mass Flow: ± 4% of reading  
Dryness: See graph to the right.

### Flow Conditioner

Cannot be used in conjunction with a flow conditioner. Ensure the required length straight piping upstream.

### External Output

Steam dryness fraction output is analog. Flow computer EC351 and an additional compensation signal (for pressure or temperature) are required to display the instantaneous mass flow rate.

## Flow Rate for Saturated Steam

### ● EF200R-C Flanged (Reduced Bore)
