PowerTrap TLV MODEL GT5C

COMPACT MECHANICAL PUMP WITH STEAM TRAP EFFECTIVE FOR ELIMINATING STALL

Features

Pump/trap with built-in steam trap, a linear inlet/outlet, low filling head, and simple piping installation for small heat exchangers and steam/air heaters often operating under stall conditions.

- 1. Handles high-temperature condensate without cavitation.
- 2. No electric power or additional level controls required, hence INTRINSICALLY SAFE.
- 3. Extremely low 155 mm filling head.
- 4. Simplified piping (no exhaust pipe required) and linear inlet/outlet greatly reduce installation time.
- 5. Easy, inline access to internal parts simplifies cleaning and reduces maintenance costs.
- 6. High-quality stainless steel internals and hardened working surfaces ensure reliability.
- 7. Compact design permits installation in a limited space.

Specifications

Model			GT5C			
Body Material		Cast Iron		Cast Stainless Steel		
Connection	Pumped Medium Inlet & Outl	et	Screwed	Flanged*	Screwed	Flanged*
	Motive Medium & Pump Exhaust		Screwed			
Size (mm)	Pumped Medium Inlet × Outlet		25 × 25			
	Motive Medium Inlet		15			
	Pump Exhaust Outlet		10			
Maximum Operating Pressure (MPaG) PMO		0.5				
Maximum Operating Temperature (°C) TMO		185				
Motive Medium Pressure Range (MPaG)			0.03 - 0.5			
Maximum Allowable Back Pressure			0.05 MPa less than motive medium pressure used			
Volume of Each Discharge Cycle (l)			Approximately 1.4			
Motive Medium			Saturated Steam			
Pumped Medium			Steam Condensate			

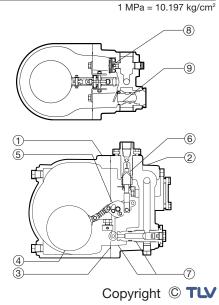

* Screwed-in flange PRESSURE SHELL DESIGN CONDITIONS (**NOT** OPERATING CONDITIONS): Maximum Allowable Pressure (MPaG) PMA: 1.0

Maximum Allowable Temperature (°C) TMA: 220

CAUTION

To avoid abnormal operation, accidents or serious injury, DO NOT use this product outside of the specification range. Local regulations may restrict the use of this product to below the conditions quoted.

restrict the use of this product to below the conditions quoted.							
No.	Description		Material	JIS	ASTM/AISI*		
1	Body		Cast Iron	FC250	A126 CI.B		
			Cast Stainless Steel**	—	A351 Gr.CF8M		
2	Cover		Cast Iron	FC250	A126 CI.B		
			Cast Stainless Steel**	_	A351 Gr.CF8M		
3	Cover Gasket		Fluorine Resin	PTFE	PTFE		
(4)	Float		Stainless Steel	SUS316L	AISI316L		
(5)	Snap-action Unit		Stainless Steel	—	—		
6	Intake-Exhaust Valve Unit	Valve	Stainless Steel	SUS440C	AISI440C		
		Valve Seat	Stainless Steel	SUS440C	AISI440C		
\overline{O}	Trap Unit (with Outlet Check Valve)***		Stainless Steel	SUS420F	AISI420F		
8	Air Vent Unit		Stainless Steel	_	_		
9	Inlet Check Valve		Stainless Steel	SUS304	AISI304		

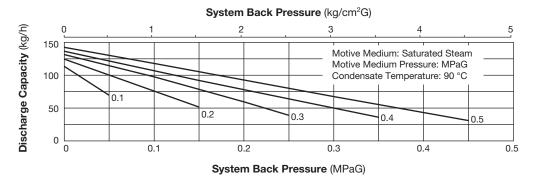

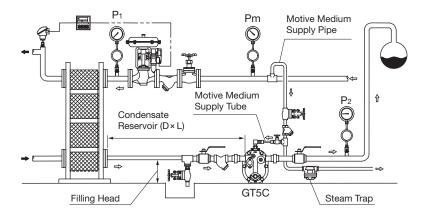

* Equivalent ** Cast Stainless Steel model uses stainless steel bolts and plugs *** Trap Unit material differs depending on body material

TLV

Pump Discharge Capacity

A Standard Pump Capacity (155 mm filling head, without Exhaust Pipe/Tube)

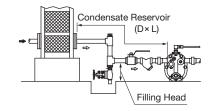

NOTE:

- Use the graph above to determine pump capacity based on the motive medium pressure (Pm) and the back pressure (P₂).
- Motive medium pressure (Pm) minus back pressure (P2) must be greater than 0.05 MPa.
- The motive medium supply pipe diameter should be at least 15 mm, and the motive medium tube and its fittings/valves should have an inner diameter of at least 8 mm.
- A 40 mesh or finer strainer must be installed at the motive medium and pumped medium inlets, and a steam trap installed on the motive medium supply pipe.
- For determining the length (L) and the size (D) of the pumped medium inlet pipe (condensate reservoir), refer to the "Size of Reservoir" table.
- It is possible to eliminate the exhaust pipe/tube in case there is vertical piping on the pumped medium inlet due to elevated position of equipment condensate outlet (as shown to the right). However the pump capacity is the standard pump capacity with 155 mm filing head.

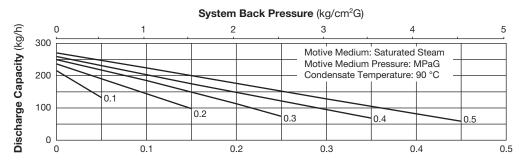

Vertical Piping Diagram

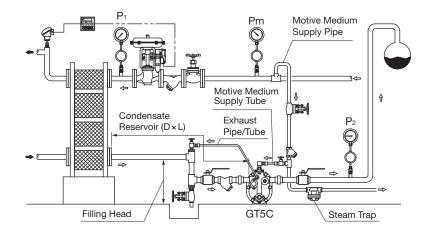

TLV

Pump Discharge Capacity (Continued)

B Increased Pump Capacity (300 mm filling head, with Exhaust Pipe/Tube)

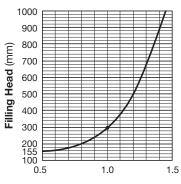

NOTE:

- Use the graph above to determine pump capacity based on the motive medium pressure (Pm) and the back pressure (P₂), using the graph to find the correction factor if the filling head is other than 300 mm.
- Motive medium pressure (Pm) minus back pressure (P2) must be greater than 0.05 MPa.
- The motive medium supply pipe diameter should be at least 15 mm, and the motive medium tube as well as the exhaust tube/pipe and its fittings/valves should have an inner diameter of at least 8 mm.
- A 40 mesh or finer strainer must be installed at the motive medium and pumped medium inlets, and a steam trap installed on the motive medium supply pipe.
- For determining the length (L) and the size (D) of the pumped medium inlet pipe (condensate reservoir), refer to the "Size of Reservoir" table.
- When installing the exhaust pipe/tube, the fitting tube delivered with the product must be installed.

(minimum filling head 155 mm)

Size of Reservoir

The reservoir must have capacity sufficient to store the condensate produced during the **PowerTrap** operation and discharge. **Size of Reservoir**

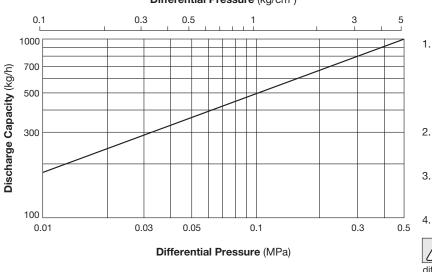

Amount of Condensate	Reservoir Diameter (mm) and Length (m)						
(kg/h)	25	32	40	50	80		
50 or less	0.6 m						
100	1.2	0.6	0.4				
150	1.8	1.0	0.6	0.4			
200	2.4	1.3	0.8	0.5			
300		2.0	1.2	0.7			
400		2.6	1.5	1.0			
500			2.0	1.2	0.5		

Reservoir length can be reduced by 50% when the motive medium pressure (Pm) divided by back pressure (P2) equals 2 or greater (when Pm ÷ P2 ≥ 2).

Other standards available, but length and weight may vary. () is for stainless steel **Steam Trap Discharge Capacity** Differential Pressure (kg/cm²)

- Capacity of GT5C as a steam trap (Inlet Pressure>Outlet Pressure). Instantaneous condensate loads above the rated trap capacity will cause the pump to cycle and therefore reduce the discharge capacity.
- 2. Capacities are based on continuous discharge of condensate 6 °C below saturated steam temperature.
- 3. Differential pressure is the difference between inlet and outlet pressure of the trap.
- 4. Recommended safety factor: at least 1.5

DO NOT use this product under conditions that exceed maximum differential pressure, as condensate backup will occur!
