

# Steam-Fired Steam-Fired Instantaneous Water Heater MODEL SQ 2/4/6/10

#### COMPACT HIGH CAPACITY INSTANTANEOUS WATER HEATER WITH SIMPLE OPERATION

### **Features**

The SteamAqua instantaneous water heater quickly produces a stable supply of 95 °C water for heating and sterilization in food product, chemical and pharmaceutical manufacturing as well as sanitary use in buildings, factories and hospitals.

- 1. Hot water at the desired temperature will be supplied in just 30 to 40 seconds<sup>1)</sup>.
- Thanks to the spiral tube heat exchanger the entire system can be packaged into a space-saving footprint of only 0.6 m<sup>2</sup> (SQ2/SQ4/SQ6) or 0.7 m<sup>2</sup> (SQ10).
- All stainless steel hot water/steam supply piping available as option for SQ4/SQ6.
- 4. All-in-one package simplifies installation.
- 5. A built-in PowerTrap (steam trap/mechanical pump) enables easy condensate recovery and prevents water hammer.
- Indirect heating with steam allows clean potable water to be heated and supplied as is, without contamination.
- 7. Simple and reliable operation with touch panel for temperature setting and system control.
- 8. Buffer water recirculation (option for SQ10) and shutoff functions prevent overheating.
- 9. Outside of pressure vessel regulations<sup>2)</sup>, so no paperwork or periodic inspections.
- 10. Operation start-up/shutdown time can be set with the schedule function (daily and weekly timers) to reduce excess power consumption.
- 11. Outdoor specifications also available for SQ2/SQ4/SQ6 as option.
- 1) May vary depending on actual operating conditions 2) Based on Japanese regulations, classification may differ depending on local regulations

## **Specifications**

Model			SQ2	SQ4	SQ6	SQ10			
Thermal Cap	ability Class		200 kW	400 kW	600 kW	1000 kW			
	Setting Range		30 to 95 °C						
	ol Valve Actuato	r Type		Pneumatic					
	Power		100 V AC (50/60 Hz) single phase						
	Steam <sup>2)</sup>			0.4 MPaG or lower					
Required	Cold Water (inf	low)		0.1 to 1.0 MPaG	Temp.: 5 to 95 °C				
Utilities	Air for Steam Co	ontrol Valve3)		0.4 to 0.6 MPaG Oil-	free Air filtered to 5 µm				
	Motive Steam for PowerTrap		0.15	0.15 to 0.4 MPaG Use supply steam					
	Cold Water	Inlet	25 JIS10KFF	50 JIS	65 JIS10KFF				
Connection	Hot Water	Outlet	25 JIS10KFF	50 JIS	65 JIS10KFF				
(mm)	Steam	Inlet	25 JIS10KFF	40 JIS10KFF	50 JIS10KFF	65 JIS10KFF			
(11111)	Condensate	Outlet		40 JIS10KFF					
	Air <sup>3)</sup>	Inlet	Rc(PT) 1/4						
Heating Metl	nod		Spiral Tube Heat Exchanger						
Applicable H	ot Water Supply	Piping	Single pass <sup>4) 5)</sup> / Recirculating <sup>6)</sup>						
Abnormal Te Preventing F	mperature Rise unction		Built-in internal cooling circulation unit <sup>7)</sup> detects minute changes in hot water flow or abnormalities in temperature and shuts off the steam supply  Circulates cold water from a buffer to decrease temperature						
Alarm Functi	ons		High-Temp/Low-Temp Warning, Alarm History Review						
Standard Ext	ernal Input/Outpu	ut Functions	External Input for Startup/Shutdown: Sets ON/OFF via external voltage-free contact input     External Input for Emergency Shutdown: Via external voltage-free contact     In Operation: Sends output during operation via voltage-free contact     External Input for Temperature Set Value: Changes set value via external analog signal (4 to 20 mA input/output)     Current Temperature Value Output: Outputs current temperature via analog signal (4 to 20 mA input/output)     Alarm Output: Sends output via voltage-free contact when there is an abnormality in temperature						
Installation L	ocation		Indoors (Outdoor specifications available as an option for SQ2/SQ4/SQ6) Indoors						
Applicable F	uids		Heating: Steam, Heated: Water						

Heating: Steam, Heated: Water

1) When an electric control valve is used for steam control, a recirculating system is recommended. For single pass method, consult TLV.

2) When steam supply pressure to the unit is set by using a pressure reducing valve with a primary pressure exceeding 0.6 MPaG (SQ2/SQ4/SQ6) or 0.4 MPaG (SQ10), make sure to install a safety valve on the secondary side of the pressure reducing valve.

3) Necessary when a pneumatic control valve is used for steam control.

4) When single pass method is used, if used for baths, handwashing or anywhere people may come in contact with hot water, install a thermostat-equipped hot/cold water mixing device. Additionally, when used in applications that may fall below the minimum required flow rate, a hot water recirculation system is required. Contact TLV for more information.

5) When single pass method is used for the SQ10, an internal cooling circulation unit (option for SQ10) must be installed to prevent temperatures from rising abnormally.

6) For closed circulation systems, make sure to install an expansion tank and safety relief vave on the hot water circulation line to protect the equipment.

7) Option for SQ10

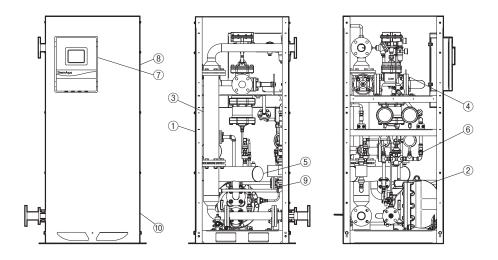

PRESSURE SHELL DESIGN CONDITIONS (**NOT** OPERATING CONDITIONS):
Maximum Allowable Pressure (MPaG) PMA: 1.0 (steam piping and water piping)
Maximum Allowable Temperature (°C) TMA: 185 (steam piping), 95 (feed water piping), 110 (hot water piping)

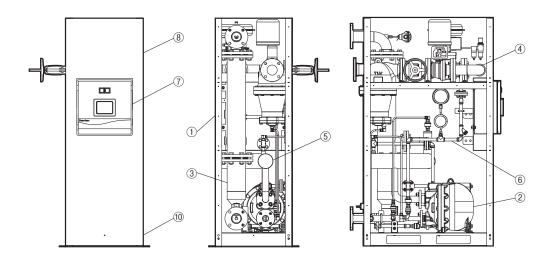

## Configuration

## • SQ2/4/6

## • SQ10

No.	Description	Material	JIS	ASTM/AISI1)
1	Base & Frame Unit	Stainless Steel	SUS304	AISI304

## **Thermal Capability**

NOTE: The thermal capability charts shown here are for reference only.

Thermal capability will vary with steam pressure and feed water temperature.

Consult TLV about actual selection as well as thermal capability.

## **Options**

Back Cover		With back cover equipped (Standard model is equipped with only front, left and right sided cover) Material: SUS304			
Circ	culation Pump Control Board	Includes a control/power supply board for operating a recirculation pump in conjunction with SteamAqua when recirculating hot water piping is used. <sup>1)</sup>			
		All four sides and top are covered.  Material: SUS304 (including base and frame unit)			
	Outdoor Specifications	Control panel: protection class rated at IP44			
		Equipped with internal electrical equipment (such as cables) for outdoor use			
	Condensate Preheater <sup>2)</sup>	Small heat exchanger installed on the inlet side of the main heat exchanger utilizes heat from condensate to preheat water <sup>3)</sup> Heating method: Spiral tube heat exchanger			
	Hot water and steam supply piping materials	Wetted portions of hot water and steam supply piping are of all stainless steel construction.			
3Q10	Separator for Steam Supply Unit	N/A (Applicable only when a separator is already installed on the steam supply line)			
	Abnormal Temperature Rise Preventing Function	Internal cooling circulation unit (buffer water recirculation) detects minute changes in hot water flow or abnormalities in temperature and shuts off the steam supply			

 $<sup>^{11}</sup>$  Pump must be operable under 100 V AC (50/60 Hz) single phase power at 0.4 kW or less.  $^{21}$  Cold water supply is limited to 10  $\rm m^3/h$  or less.

Manufacturer Kakogawa, Japan approved by LRQA Ltd. to ISO 9001/14001

<sup>3)</sup> May vary depending on actual operating conditions
